From the menu options, select *Assura → Run RCX*...

Under the Setup tab, click SetupDir and make sure the pathname is:

```
/home/ff/ee141/gpdk090_v3.9/assura/rcx
```

For Output, select **Spice** instead of Extracted View and change the Name to the location/filename you want.

(Everything else should be the same as before.)

Click OK.

After RCX is done, you should see the netlist in the directory you specified.
